

NATEAT

Food Delivery — Design & Dev Spec

v1.0 · Landing Page · March 2025

Product	Version	Status	Owner
NATEAT Landing Page	v1.0	In Development	Design Lead
Tech Stack	Framework	Icons	Date
HTML / CSS / Vanilla JS	None (pure CSS)	Inline SVG	March 2025

© 2025 NATEAT Team. Confidential — Internal use only.

1. Design Overview

The NATEAT landing page is a food delivery dashboard UI built as a single-page HTML artifact. The design philosophy is warm-luxury: a rich purple shell wrapping a light card interior, with gold accents providing energy and contrast. All components are responsive to hover/active states and provide immediate visual feedback.

Design Principles

Principle	Application
Warm Luxury	Purple (#6A4C9C) background contrasted by white card surfaces and gold accents
Immediate Feedback	Every interactive element responds within 0.2s via CSS transitions
Visual Hierarchy	Nunito 900 Black for prices/headings, DM Sans for body — clear weight contrast
Spatial Rhythm	22px base radius, 16px card gap, 24px internal padding — consistent throughout
Data-First	Key numbers (price, rating, points) are always the largest element in their group

2. Color System

#F5A623 Gold / Primary	#FFD166 Gold Light	#7B5EA7 Purple BG	#6A4C9C Purple Deep	#F7F6FF Card BG	#FFFFFF White
#1A1A2E Text Dark	#8E8EA8 Text Muted	#2ECC71 Success	#E74C3C Danger		

CSS Variable	Hex	Role
--gold	#F5A623	Primary CTA, active states, sparklines, border accents
--gold-light	#FFD166	Avatar border, cover subtitle, lighter gold highlights
--purple-bg	#7B5EA7	App shell outer background gradient (start)
--purple-deep	#6A4C9C	App shell gradient mid-point, header cells, sidebar active line bg
--white	#FFFFFF	Sidebar bg, right panel bg, card surfaces, search input
--card-bg	#F7F6FF	Main content background, qty button hover bg, active nav bg
--text-dark	#1A1A2E	Primary text, headings, category numbers

--text-muted	#8E8EA8	Captions, metadata, inactive nav icons, edit links
--danger	#E74C3C	Error states (reserved)
--shadow-card	0 8px 32px rgba(100,80,160,0.13)	Default card elevation
--shadow-btn	0 4px 18px rgba(245,166,35,0.45)	Checkout / CTA button shadow

3. Typography

Role	Font Family	Weight	Size	Use Case
Display / Brand	Nunito	900 Black	30px–44px	Headings, logo, prices
Sub-headings	Nunito	800 ExtraBold	14px–20px	Section titles, nav labels
Body / UI	DM Sans	400 Regular	12px–14px	Descriptions, metadata
Code / Tokens	Courier New	400 Regular	11px–14px	CSS vars, hex codes

Font Loading

Google Fonts are loaded via a single `<link>` in `<head>`. Both Nunito and DM Sans are loaded together to minimise round-trips.

```
<link
href="https://fonts.googleapis.com/css2?family=Nunito:wght@400;600;700;800;900&family=DM+Sans:wght@400;500;600&display=swap" rel="stylesheet">
```

i Always use `font-display: swap` (handled by Google Fonts) to prevent invisible text during load.

4. Layout & Grid

Zone	Width	CSS	Contents
Sidebar	64px	fixed width, flex col	Logo, nav icons, logout
Main Content	1fr (flex)	grid-template-columns: 64px 1fr 320px	Search, stats, categories, recommendations
Right Panel	320px	fixed width	User, delivery, order summary, checkout
Shell radius	28px	border-radius: 28px	Outer container
Min height	600px	min-height: 600px	App shell

Max width	1200px	max-width: 1200px	App shell
-----------	--------	-------------------	-----------

The three-column CSS Grid is defined on .app-shell with grid-template-columns: 64px 1fr 320px. All three zones sit at min-height: 600px. Overflow in the main column is handled by overflow-y: auto with a custom scrollbar (4px wide, #D0CCE8 thumb).

5. Spacing & Radius Tokens

Token	Value	CSS Variable / Usage	Applied To
--radius	22px	var(--radius)	Cards, promo boxes, reco section
--radius-sm	12px	var(--radius-sm)	Buttons, input, order items
--gap-card	16px	gap in grid	Stats row, reco cards
--gap-list	12px	gap in flex col	Order list items
Padding (card)	18–24px	padding: 18px 20px / 24px 22px	Points card, promo card, panel
Icon size (nav)	20px	svg width/height	Sidebar nav icons
Avatar	44×44px	width/height	User avatar, logo box

6. Component Spec

Component	Variant / State	Key CSS	Notes
Checkout Button	Default	bg:#F5A623, border-radius:14px, font:Nunito 900	box-shadow: 0 4px 18px rgba(245,166,35,0.45)
Checkout Button	:hover	translateY(-2px), box-shadow 0 8px 28px	No background change on hover
Add Order Button	Default	border: 2px solid #F5A623, bg: none, color: #F5A623	Becomes filled gold on :hover
Qty Button (-/+)	Default	width:20px, border: 1px #E0DCF0, radius: 6px	Turns gold on :hover
Category Circle	Default	width:76px, border-radius:50%, shadow-card	translateY(-3px) on active/hover
Category Circle	Active	border: 2.5px solid #F5A623	Class: .active-ring
Reco Card	Default	bg: rgba(255,255,255,0.15), radius: 12px	On gold (#F5A623) background section
Reco Card	:hover	translateY(-3px), bg rgba(255,255,255,0.25)	Smooth 0.2s ease

Nav Item (Sidebar)	Active	bg: #F0EEF8, left accent bar 4px gold	Class: .nav-item.active
Search Input	:focus	box-shadow: 0 0 0 3px rgba(245,166,35,0.25)	No visible border change

Right Panel — Order Summary

The panel uses display: flex, flex-direction: column with gap: 20px between zones. The total section is pushed to the bottom via margin-top: auto on .total-section, ensuring the checkout button always anchors to the foot of the panel regardless of order item count.

Sidebar Navigation

The sidebar is 64px wide with no labels — icon-only design. Each nav-item is 44×44px with a 12px border-radius. The active item shows a 4px left bar in --gold positioned absolutely at left: -4px. A badge-dot (7px circle, gold border 2px white) indicates unread notifications on the mail icon.

7. Motion & Animation

Animation	Definition	Trigger	Element
slideUp	opacity 0→1, translateY 30px→0, 0.6s cubic-bezier(0.22,1,0.36,1)	Page load	.app-shell
hover lift	translateY(-3px), box-shadow amplify, 0.2s ease	mouseover	.cat-circle, .reco-card
btn press	translateY(0), 0.15s ease	:active	.checkout-btn
input focus ring	box-shadow 0 0 0 3px rgba(245,166,35,0.25)	:focus	search input
heart toggle	text swap ♡↔💜 via JS	click	.heart-btn
qty update	textContent change, 0→99 clamp	click	.qty-btn

i All transitions are CSS-only (transition property). No external animation library is used in v1. If upgrading to React, consider Framer Motion for the page-load slideUp.

8. Assets & Icons

Asset	Format	Size	Notes
Logo icon (fork/knife)	Inline SVG	24×24 viewBox	Fill: white, bg: #F5A623

Nav icons	Inline SVG	20×20 viewBox	Stroke: #F5A623 (active) / #B0AECB
Action icons (search, bell, etc.)	Inline SVG	18×20 viewBox	Stroke-width: 2, no fill
Sparkline chart	Inline SVG	160×40 viewBox	CSS gradient fill, Courier labels
Category / food imagery	Emoji (placeholder)	34–40px font-size	Replace with optimized WebP in production

All icons are inline SVG with stroke-based rendering (fill: none). This allows direct color control via CSS (stroke property or currentColor). Nav icons use color: #F5A623 for active and #B0AECB for inactive — override via CSS only, no icon swapping required.

i Production: replace emoji food placeholders with 90px WebP images (optimised to <15KB each). Use width/height attributes on img tags to avoid layout shift.

9. Handoff Checklist

☐	Export color tokens to CSS variables file (tokens.css)	Frontend lead
☐	Upload Nunito + DM Sans fonts to CDN (fallback if GFonts blocked)	DevOps
☐	Replace emoji placeholders with production WebP images	Designer
☐	Connect qty +/- to real cart state / API endpoint	Backend dev
☐	Wire up checkout button to payment flow	Backend dev
☐	Add search input debounce + filter logic (300ms)	Frontend dev
☐	Implement responsive breakpoint for tablet (< 900px)	Frontend dev
☐	Implement responsive breakpoint for mobile (< 600px)	Frontend dev
☐	Accessibility audit: add aria-labels to icon-only buttons	Frontend dev
☐	Test across Chrome, Firefox, Safari, Edge	QA
☐	Figma frame created and linked in project Notion	Designer
☐	Lighthouse performance score > 90	Frontend dev

10. Figma / Collaboration Notes

Figma Setup Recommendations

Setting	Value
Frame size	1440 × 900px (desktop default)
Grid	12-column, 24px gutter, 80px margin
Color styles	Create styles from Section 2 tokens — name them gold/primary, purple/deep etc.
Text styles	Display/H1 (Nunito 900 36px), H2 (Nunito 800 24px), Body (DM Sans 400 14px)
Component naming	Use / notation: Button/Checkout, Button/AddOrder, Card/Reco, Card/Category
Variants	All interactive components need Default + Hover + Active variant states
Auto Layout	Use Auto Layout for sidebar (vertical) and categories row (horizontal)
Constraints	Right panel: right+top, Sidebar: left+top, Main: scale

Sharing & Handoff

When sharing the Figma file with developers, enable Dev Mode (Figma Professional/Org required). This exposes CSS values, spacing, and asset exports directly in the inspector. Share link with "can view" permissions only — no edit access for developers.

For this HTML prototype: share the .html file directly. All styles are self-contained in a single <style> block — no build step, no dependencies. Open in any modern browser.

i Recommended: paste this spec into your team Notion as the source of truth. Link to it from the Figma description and the GitHub/GitLab repo README.
